- Java
- Python

NGUYEN HOANG HAI

INFORMATION TECHNOLOGY INTERN

PROFILE

Born on May 12, 2004, I am a Information Technology student at Saigon University with a strong passion for software development. I have built a solid foundation in programming through active participation in various real-world projects. My technical strengths include Java (Spring Boot), JavaScript (React.js/Next.js, Node.js/Express.js/Nest.js), and Python (Django). I am especially focused on backend development and am working towards becoming a fullstack developer. I also bring strong problem-solving, teamwork, and communication skills to every project I contribute to.

WORK EXPERIENCE

Project: CarMaster

2024

Role: Fullstack

Led a team to develop a car dealership management application with user role permissions (admin, sales, inventory). Designed the database schema and implemented backend functionalities. Conducted system testing and made improvements based on user feedback.

Project: Sportify Clone

2025

Role: Fullstack

Built a fullstack Spotify clone with features like music/album playback, upload, favorites, user-to-user chat, and admin management of songs, albums, and users. Developed the entire project using React for the frontend and Django for the backend.

Project: Facebook Clone

2025

Role: Fullstack

Built a fullstack Facebook clone featuring post creation, likes, user-to-user chat, chatbot integration, and admin control over posts, users, and reports. Developed using React for the frontend and Spring Boot for the backend.
